(54) MONITORING SYSTEM CENTER APPARATUS, MONITORING SYSTEM CENTER PROGRAM AND RECORDING MEDIUM FOR RECORDING MONITORING SYSTEM CENTER PROGRAM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a monitoring system center apparatus in which a desired detailed image of an object can be displayed even on a small display screen at a portable terminal in a monitoring system for transmitting an image imaged by a monitoring camera to the terminal via a communication network.

SOLUTION: The image imaged by the monitoring camera is stored in an image database 13 for the monitoring system center apparatus, and then transmitted as an overall image to a portable telephone 3. When a user confirms the image displayed on the telephone 3 and determines that there is an object desired to be enlarged and displayed, the user accesses a WEB page distributed by the center apparatus, and displays an enlarging display menu. When the enlarged display object is selected by the user, the image recognition process is conducted by an image recognition processing unit in the center apparatus. A partial image including the enlarged display object is extracted, and transmitted to the portable telephone.
